

I am very fortunate to be able to participate in 16th ISCS , 'International Seminar on Climate System and Climate Change', this summer. Through a 9-day study, I gained a deeper understanding of the climate system and climate change related knowledge. During this period, I also met many friends which from different places but all of them are involved in climate change. We shared our understanding of climate change and environmental issues. We all have a great time.

Teachers from different countries show us the most cutting-edge scientific issues in their respective fields of research. The teachers' discovery problems and the rigorous research ideas to solve the problems have inspired me a lot. Through this study, I realized the impact of climate change on the environment and our daily lives, as well as the research difficulties of climate change. The workshop is difficult to overcome in order to take care of our language. We specially arranged for five Chinese tutors to help us

achieve our stated learning goals.
